

## Country Report Bosnia and Herzegovina

---

Since our last meeting, the number of patients has drastically increased. There is over 600 patients in the association of patients with an ostomy in Republic of Srpska. Last year there were 15 new born children with an ostomy. Children without an anal opening are being born. It is thought to be an influence of impoverished uranium as a consequence of bombing during the last war.

With my organization I took a part in a project that was organized by Isabella Grosu in Romania in 2013.

I have a good cooperation with associations from Croatia, Slovenia, Poland, Check Republic and Hungary. Along with Snezana Milojevic-Cmijanic I work on forming an association in Montenegro.
